

Sealer MK-749

Description:

Sealer MK-749 is an easy-to-use, solvent-based sealer for mould treatments. It is easy to use and has been developed to seal clean moulds prior to operation. Sealer MK-749 contains special ingredients to seal the mould's surface. When using new or porous moulds for production, sealing the surfaces with Sealer MK-749 is absolutely inevitable.

Application Fields:

Sealer MK-749 is a sealer, suited for special applications with rubber compounds. Sealer MK-749 can be used on any mould surface.

Application:

Prior to the first application of Sealer MK-749, ensure to thoroughly clean the molds from dirt and former release agent residues. We therefore recommend the use of our Cleaner R-52. Use a cotton cloth to apply a thin layer of Sealer MK-749. Immediately after the coating, use a second cloth to polish the applied Sealer MK-749 onto the mould's surface. Continue by applying an appropriate release agent to the mold. We recommend to use Release Agent MK-750, since it is specially adjusted to incorporate with Sealer MK-749. Commence by starting up the production.

Technical Data:

Composition:	resins in solvent
Appearance:	colorless liquid
Density [g/cm³]:	approx. 0.86
Flashpoint [°C]:	approx. 25

Packaging:

Can	25.8 kg
Drum	172 kg

Storage:

Sealer MK-749 should be stored in tightly sealed containers and has to be protected from frost, heat and direct sunlight. If these rules are obeyed, the product can be stored for at least 6 months. The expiry date is stated beneath the production date on the labels of each container.

Information for regulations on safety and transportation are provided in the safety data sheet

Further information:

Product technical information and data is based on the best information available and does not constitute or imply a warranty or patent infringement of any kind. The user is responsible for testing product suitability prior to use in production.
